

Nutrient Management in Improving the Productivity of Lowland Rice in the Philippines

Pompe C. Sta. Cruz
Crop Science Cluster, College of Agriculture
University of the Philippines Los Banos

Nutrient Management for Lowland Rice

- Subject of research for several decades
- Assumptions
 - ✓ Results should have been incorporated in nutrient management recommendations
 - ✓ Recommendations have been adopted/adapted by farmers
 - ✓ Rice nutrition is not a yield-limiting component in lowland rice production
- Current situation: low-medium productivity of Philippine lowland rice areas
 - ✓ Are there any gaps in the utilization of recommended or appropriate nutrient management?
 - ✓ Can nutrient management contribute to the improvement of lowland rice productivity?

Presentation Outline

- Nutrient Balance & Sources of Nutrients
- Chemical Properties of Philippine Soils
- Soil Nutrient Supplying Capacity & Plant NPK Requirement
- Recommended & Actual Nutrient Management Practices
- Nutrient Management Approaches in Improving Lowland Rice Yields
- Conclusion & Recommendation

Nutrient Balance and Sources of Nutrients in Lowland Rice Production System

Values shown are common ranges of inputs and outputs of N, P, and K for an irrigated rice field (kg ha⁻¹ per crop).

Dobermann & Fairhurst (2000)

Nutrient Input-Output Balance

| SOURCE | N | | P | | K | |
|-------------------------|---------------------|-------|---------------------|----------|---------------------|-------|
| | kg ha ⁻¹ | % | kg ha ⁻¹ | % | kg ha ⁻¹ | % |
| INPUTS | | | | | | |
| Fertilizers | 80-150 | 60-67 | 10-25 | 79-84 | 0-40 | 0-27 |
| Crop Residues | 5-30 | 4-12 | 1-4 | 8.4-12.6 | 10-60 | 40-41 |
| Irrigation | 2-5 | 1.6-2 | 0.5-2 | 4-4.2 | 10-40 | 27-41 |
| Rain/Dust | 2-5 | 1.6-2 | 0.3-0.5 | 1.6-2.5 | 4-8 | 5-6 |
| BNF | 30-60 | 24-25 | - | - | - | - |
| Seeds | < 1 | 0.5 | <0.1 | 0.5 | <0.3 | 0.03 |
| Total Input (A) | 120-250 | | 11.9-31.6 | | 24.3-148.3 | |
| OUTPUTS | | | | | | |
| Crop Uptake | 70-130 | 53-54 | 10-20 | 91 | 60-120 | 86 |
| Gaseous Loss | 50-100 | 38-41 | - | - | - | - |
| Leaching | 10-15 | 6-8 | 1-2 | 9 | 10-20 | 14 |
| Total Output (B) | 130-245 | | 11-22 | | 70-140 | |
| Net (A-B) | (5-10) | | 1-10 | | (46)-8 | |

Adapted from Dobermann & Fairhurst (2000)

Chemical Properties of Philippine Soils

| Soil Parameter | Philippines | | Tropical Asia |
|-------------------------------------------------|--------------------|--------------------|--------------------|
| | Surface | Subsurface | Surface |
| Organic C (%) | 1.84 ± 1.09 | 0.47 ± 0.39 | 1.41 ± 1.28 |
| Total N (%) | 0.17 ± 0.11 | 0.04 ± 0.03 | 0.13 ± 0.11 |
| C/N ratio | 11.6 ± 1.8 | 10.4 ± 3.0 | 11.2 ± 2.7 |
| pH (H ₂ O) | 6.3 ± 0.7 | 6.9 ± 0.6 | 6.0 ± 1.1 |
| CEC (pH 7) (cmol+/kg) | 37.3 ± 13.7 | 39.5 ± 14.8 | 18.6 ± 12.0 |
| Exch Ca (cmol+/kg) | 25.6 ± 9.5 | 27 ± 9.6 | 10.4 ± 9.9 |
| Exch Mg (cmol+/kg) | 10.4 ± 4.5 | 11.9 ± 5.1 | 5.5 ± 5.3 |
| Exch K (cmol+/kg) | 0.5 ± 0.4 | 0.3 ± 0.3 | 0.4 ± 0.3 |
| Exch Na (cmol+/kg) | 1.5 ± 2.1 | 1.5 ± 1.5 | 1.5 ± 3.0 |
| Ave P₂O₅ (mg/100g) | 4.0 ± 4.0 | 5.2 ± 8.6 | 3.8 ± 10.6 |
| Ave SiO ₂ (mg/100g) | 54.3 ± 24.4 | 68.0 ± 23.1 | 27 ± 25.5 |

Miura, Badayos & Briones (1995)

Soil Nutrient Supplying Capacity

Omission Plots- SNSC

Cassman, Dobermann, Witt, Buresh, ... Sta. Cruz ... (1993-2000) - IRRI

179 RTOP Farms: S & SE Asia

| Nutrient | Soil Supply of Nutrient (kg ha ⁻¹) |
|------------|------------------------------------------------|
| Nitrogen | 40 - 70 |
| Phosphorus | 12 - 18 |
| Potassium | 65 - 90 |

Lowland rice fields can sustain grain yields of 2-3 t/ha without fertilizer application

Plant NPK Requirement

| Optimal IE for Balanced Nutrition | |
|-----------------------------------|-----------------------------------------|
| Nutrient | IE (kg grain kg ⁻¹ nutrient) |
| N | 68 |
| P | 385 |
| K | 69 |

Per ton basis

$$1/68 = x/1000$$

| Nutrient | Nutrient Requirement (kg ha ⁻¹) |
|----------|---------------------------------------------|
| N | 15 |
| P | 2.6 |
| K | 15 |

Witt and Co-workers (1999)

Cassman, Dobermann, Witt, Buresh, ... Sta. Cruz... (1993-2000) - IRRI

SNSC, NPK Requirement and Rice Yields at Zero Fertilizer Application

| Nutrient | Soil Supply of Nutrient Capacity (kg ha ⁻¹) | Nutrient Requirement per Ton of Grains (kg ha ⁻¹) | Yields based on Lower Limit* (t ha ⁻¹) |
|----------|---------------------------------------------------------|---------------------------------------------------------------|----------------------------------------------------|
| N | 40 - 70 | 15 | 2.67 |
| P | 12 - 18 | 2.6 | 4.61 |
| K | 65 - 90 | 15 | 4.33 |

- N --- most limiting nutrient
- 2.8-4.9 t/ha yields in unfertilized plots within rice growing domains at scales of one to few villages in 5 Asian countries including Philippines (Dobermann and White, 1996)
- 2.61 t/ha (1.59-3.52 t/ha) during DS (Quezon condition; CRDES, 2010)
- 2.74 t/ha (1.32-4.59 t/ha) during WS (Quezon condition; CRDES, 2010)

NPK Fertilizer Applications and Rice Yields in 2008 (BAS, 2011)

| Region | Area Planted (ha) | Area Applied (ha) | Unfertilized Area (%) | Yield (mt) | Nutrient Applied (kg/ha) | | | Yield (kg/ha) |
|---------------------|-------------------|-------------------|-----------------------|-------------------|--------------------------|-------------|------------|---------------|

Suggested NM Agronomic Approaches to Increase Lowland Rice Yield

- Increase fertilizer application at farmers level
- Improve yield-determining components during grain filling through appropriate timing of fertilizer application
- Increase nutrient uptake through GM/organic-inorganic combinations and bio-inoculant technologies → enhancement BNF and nutrient absorption-facilitating microorganisms activity
- Use of slow-release fertilizers to improve fertilizer recoveries
- Residue recycling to increase nutrient input component of the production system
- Appropriate crop management (other than nutrient management component) --- overcome major yield-limiting constraints

Improvement of Yield through Increased Fertilizer Application

Assumptions

- ❑ Lowland rice fields can support 2.5 t/ha yields without fertilizer application
- ❑ Mean yields of 3.68 t/ha → to be increased by 1 t/ha
- ❑ NPK recovery efficiencies: 40, 20 & 35%

Improvement of Yield through Increased Fertilizer Application

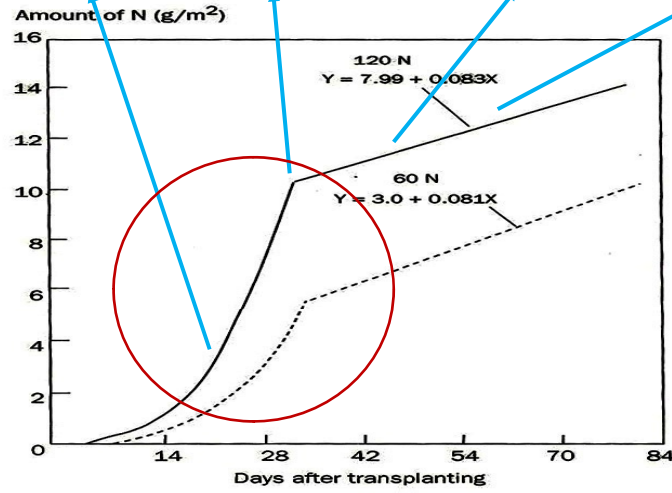

$$\text{Needed Fertilizer?} = \frac{\text{Plant Requirement} - \text{Indigenous Nutrient Supply}}{\text{Fertilizer Recovery Efficiency}}$$

4.68 tons target yield --- 1 ton increase from current mean yield

| Nutrient | Plant Nutrient Requirement (kg/ha) | | Indigenous Nutrient Supply (kg/ha) | | Fertilizer Recovery Efficiency | = | FertilizerRate (kg/ha) |
|----------|------------------------------------|---|------------------------------------|---|--------------------------------|---|------------------------|
| N | 70.2 | - | 37.5 | + | 0.40 | = | 81.8 |
| P | 12.2 | - | 10 | + | 0.20 | = | 11 (25) |
| K | 70.2 | - | 60 | + | 0.35 | = | 29.1 (35) |

Yield Components and Nitrogen Application

$$\text{Yield} = \# \text{ Panicles} * \# \text{ Spikelets/Panicle} * \% \text{ Filled Spikelets} * \text{Spikelet Weight}$$

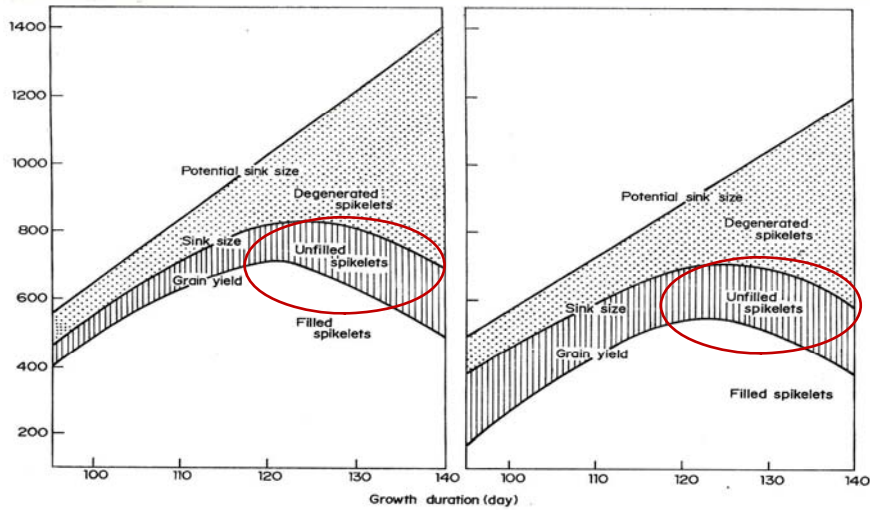

Modified from: Wada et al. (1989) & Sta. Cruz and Wada (1994)

Development of Yield Components and Growth Stages

$$\text{Yield} = \# \text{ Panicles} * \# \text{ Spikelets/Panicle} * \% \text{ Filled Spikelets} * \text{Spikelet Weight}$$

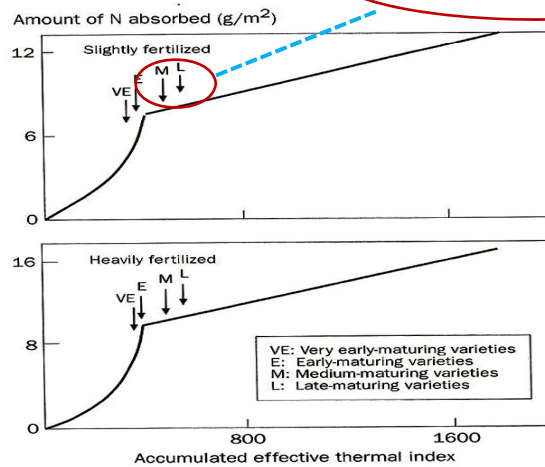

Degenerated/Unfilled Spikelets and Growth Duration

Sta. Cruz (1990); Sta. Cruz & Wada (1994)

Fertilizer Application at Pre-Post Flowering to Improve Grain Filling

$$\text{Yield} = \# \text{ Panicles} * \# \text{ Spikelets/Panicle} * \% \text{ Filled Spikelets} * \text{Spikelet Weight}$$

Modified from: Wada et al. (1989) & Sta. Cruz and Wada (1994)

Yield Improvement through Increasing Grain Filling Percentage

For medium and long duration varieties (>125 d) with high potential sink size or yield containers

| Intervention | Season | Target Contribution (%) | Potential Yield Increment (t/ha) |
|-----------------------------------------|------------|-------------------------|----------------------------------|
| Improvement of grain filling percentage | Wet Season | 5 | 0.18* |
| | Dry Season | 10 | 0.37* |

* based on 3.68 t/ha base yield

Positive implication on agronomic efficiency based on nutrient application

Yield Improvement through Increasing Nutrient Availability & Enhancement of Nutrient Uptake

| Intervention | Contribution to Nutrient Availability (kg/ha) | Target Contribution (%) | Additional Available Nutrient (kg/ha) | Potential Yield Increment (t/ha) |
|-------------------------------------------|-----------------------------------------------|-------------------------|---------------------------------------|----------------------------------|
| GM Crops | 20-30 | 30 | 6-9 | 0.4-0.6 |
| BNF --- via inorganic-organic integration | 14-50 | 10 | 1.4-5 | 0.09-0.33 |
| Bio-inoculant | | 6-8 | | 0.22-0.29* |

* based on 3.68 t/ha base yield

Yield Improvement by Increasing Fertilizer Recovery Efficiency through Use of Slow-release Fertilizers

| Intervention | N Use Efficiency (%) | Target (%) | Additional N uptake (kg/ha) | Potential Yield Increment (t/ha) |
|----------------------------|----------------------|------------|-----------------------------|----------------------------------|
| Slow release N fertilizers | 40 | 50 | 5.64* | 0.38* |

* based on 10% increase in FRE, 56.4 kg N/ha current application and 15 kg N per ton IE

Crop Removal and Nutrient Recycling from Rice Straw

| Plant Part | Nutrient Uptake per Ton Grain Yield | | |
|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | N | P | K |
| Grain | 10.5 | 2 | 2.5 |
| Straw | 7 | 1 | 14.5 |
| Total | 17.5 | 3 | 17 |
| | <ul style="list-style-type: none"> • \approx40% of N --- in straw at maturity • almost all of N is lost upon burning | <ul style="list-style-type: none"> • \approx33% of P --- in straw at maturity • 20-25% of P in straw is lost on burning | <ul style="list-style-type: none"> • \approx85% of aboveground plant K in straw at maturity • K in straw is not lost upon burning |

Modified from: Dobermann & Fairhurst (2000)

Summary of Nutrient Management Interventions in Improving Lowland Rice Yields (under good crop management)

| Intervention | Anticipated Yield Increase (t/ha) |
|----------------------------------------------------------------------|--------------------------------------|
| Increased fertilizer application (medium yield target: 4.68 t/ha) | 1.00 |
| Improvement of grain filling percentage | 0.28 (0.18-0.37) |
| GM Crops | 0.5 (0.4-0.6) |
| BNF (via inorganic-organic combination) | 0.21 0.09-0.33 |
| Bio-inoculant | 0.26 (0.22-0.29) |
| Slow-release N fertilizers | 0.38 |
| Range (due to individual interventions) | 0.21-1.0 |
| Total (assuming all interventions are imposed - ideal) | 2.63 |
| Yield range* (imposition of at least 1 intervention) | 3.89-4.68 |
| * Mean base yield: 3.68 t/ha (actual base yields may range 2-5 t/ha) | |

Contribution of Nutrition and Crop Management Components to Rice Yield

| Yield Limiting Component | Yield Reduction* (%) | Yield when Limiting Component is Controlled** (t/ha) |
|-----------------------------|----------------------|------------------------------------------------------|
| Nutrition | 20 | 4.91 |
| Crop management | 20 | 4.91 |
| Nutrition + crop management | 40 | 6.13 |

* Dobermann & Fairhurst (2000)

** based on 3.68 t/ha base yield

Conclusion and Recommendations

- ❑ **Increasing productivity of lowland rice is possible**
 - ✓ 3.68 – 4.68 by increasing fertilizer application alone
 - ✓ 3.68 – 6.31 by improving NM components, in addition to increased level of fertilizer application
 - ✓ Major assumption: under good crop management (components other than nutrition)
- ❑ **Integration of decision-aided tool** in nutrient management of lowland rice --- site specific
- ❑ **Review current nutrient management technology recommendations**, delivery systems and related support services

Thank You
